

School Management System

A simple, reliable academic solution for schools.

PRESENTED BY: MOAMEN & ESRAA

JUNE 7, 2026

The Problem Statement

Data in Different Places

Each department keeps its own records, which causes mistakes and confusion.

Too Much Manual Work

Grading and payroll take too much time by hand.

Payroll Errors

Hourly and salaried staff are paid in separate systems, which leads to mistakes.

The Solution — One Cohesive Ecosystem

One Central System

Built to connect the core parts of the university in one place, so information flows smoothly and stays easy to use.

- Tracks students, instructors, and key academic records from start to finish.
- Each part works on its own, but all parts stay connected.
- Speeds up updates so staff can access current information quickly.

The Solution (Cont.)

A menu-driven CLI project built for efficiency.

Student Management

Track enrollment, status, and degree progress.

Instructor Management

Handle pay for full-time and part-time instructors.

Course Management

Manage credit hours, teaching assignments, and enrollments.

Exam Management

Record scores, weighted marks, and pass rates.

Result Management

View student performance and academic results.

Core Module Architecture

Core Module	System Responsibilities	Primary End-User
Course Management	Credit hours, teacher assignment, and enrollment links	Academic Advisors
Instructor Management	Enforces dynamic salary and hourly rate calculations	HR & Administrator
Student Management	Enrollment year, student status, and degree level	University Registrar
Exams & Results	Test scores, weighted grades, and pass percentages	Academic Board

Financial & Administrative Precision

Automated Payroll Intelligence

Part-time and full-time instructors are kept separate in the system, but shown together in the interface. Salary calculations happen automatically.

No Manual Calculations

Saves HR hundreds of hours each semester

Fewer Mistakes

Enrollment and payroll stay accurate

Student Success Tracking — Real-Time

The **Progress Tracker** links together courses, tests, and grades. It shows student performance right away.

Advisors see live status: active, withdrawn, or graduated. No manual updates are needed.

The Trust Factor-Grade Reliability

Clear Error Handling

The system catches errors and keeps working instead of stopping

Careful Input Checks

Wrong information is stopped before it causes problems

Clear On-Screen Warnings

Users can see problems quickly and keep going

Built for Tomorrow — Ready to Grow

Strong foundations make it easy to add new features, expand to new campuses, and scale without disruption.

Online Payments

Add them without changing everything else.

Library Management

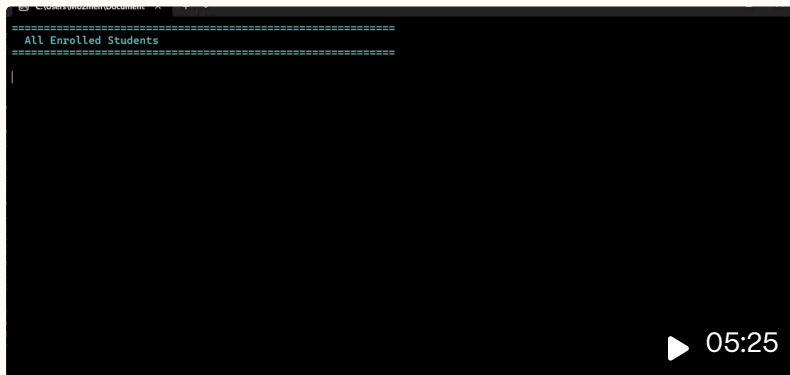

Works well with the current system.

Multi-Campus Rollout

Ready for Cairo and more locations.
